

Install Dutch nlp modules on Lisa

Paul Huygen <paul.huygen@huygen.nl>

3rd November 2014
09:26 h.

Abstract

This is a description and documentation of the installation of the current NLP modules on Lisa, so that they can be used in pipelines.

1 Introduction

This document describes the current set-up of pipeline that annotates dutch texts in order to extract knowledge. The pipeline has been set up by the Computational Lexicology and Terminology Lab (CLTL ¹) as part of the newsreader ².

Apart from describing the pipeline set-up, the document actually constructs the pipeline. The described version has been made with an aim to run it on a specific supercomputer (Lisa, Surfsara, Amsterdam ³), but it can probably be implemented on other unix-like systems without problems.

The installation has been parameterized. The locations and names that you read (and that will be used to build the pipeline) have been read from variables in file `inst.m4` in the nuweb directory.

1.1 List of the modules to be installed

Table 1 lists the modules in the pipeline. The column *source* indicates the origin of the module. Ideally, modules are directly obtained from a public repository, e.g. Github, or from a website of the organisation where the module has been built. However, some of the modules are not yet available in this way and only an informal snapshot is available. Table `/reftab:modulesources` provides the URL’s of the sources that have been obtained from a public repository.

1. <http://wordpress.let.vupr.nl>
 2. <http://www.newsreader-project.eu>
 3. <https://surfsara.nl/systems/lisa>

module	directory	source	script	Details
Tokenizer	tokenizer-base	Github	tok	
morphosyntactic parser	morphosyntactic_parser_nl	Github	mor	
alpinohack	clean_hack	This doc.	alpinohack	4
NERC	../modules/jars	Snap	nerc	
WSD	wsd	Snap	wsd	
Onto	ontotagger	Snap	onto	
Heidel	NAF-HeidelTime	Github	heidelttime	
SRL	vua-srl-nl	Github	srl	
NED	ned	None	ned	
Nom. coref	/dev/null	None	nomcoref	
Ev. coref	/dev/null	None	evcoref	
Opinion miner	/dev/null	None	opininin	
Framenet sem. role label.	/dev/null	None	fsrl	

Table 1: List of the modules to be installed. Column description: **directory**: Name of the subdirectory below subdirectory **modules** in which it is installed; **Source**: From where the module has been obtained; **script**: Script to be included in a pipeline.

The modules themselves use other utilities like dependency-taggers and POS taggers. These utilities are listed in table 2.

module	directory	source	Details
KafNafParserPy	python/KafNafParserPy	Github	
Alpino	Alpino	RUG	
Ticcutils	ticcutils-0.7	ILK	
Timbl	timbl-6.4.6	ILK	
Treetagger			

Table 2: List of the modules to be installed. Column description: **directory**: Name of the subdirectory below **mod** in which it is installed; **Source**: From where the module has been obtained; **script**: Script to be included in a pipeline.

Table 3 lists the source of the modules and utilities that can be installed from an open source.

module	source	URL
Tokenizer	Github	https://github.com/opener-project/tokenizer-base.git
Morphosynt. p.	Github	https://github.com/cltl/morphosyntactic_parser_nl.git
heidelttime.	Github	https://github.com/cltl/morphosyntactic_parser_nl.git
Alpino	RUG	Alpino-x86_64-linux-glibc2.5-20548-sicstus.tar.gz
Ticcutils	ILK	ticcutils-0.7.tar.gz
Timble	ILK	timbl-6.4.6.tar.gz

Table 3: Sources of the modules

The informal snapshots are available in a tarball **nl_pipeline_snapshots** that can be obtained from the author of this document.

1.2 File-structure of the pipeline

The files that make up the pipeline are organised in set of directories:

nuweb: This directory contains this document and everything to create the pipeline from the open sources of the modules.

modules: Contains the program code of each module in a subdirectory. Furthermore, it contains a subdirectory **python** for python software-modules, subdirectory **jars** for jar files and subdirectory **/usrlocal/** for binaries and libs that are used by modules.

bin: Contains for each of the modules a script that reads NAF input, passes it to the module in the **modules** directory and produces the output on standard out. Furthermore, the subdirectory

contains the script `install-modules` that performs the installation, and a script `test` that shows that the pipeline works in a trivial case.

nuweb: Contains this document, the nuweb source that creates the documents and the sources and a Makefile to perform the actions.

\langle *directories to create 4a* $\rangle \equiv$
`../modules` \diamond

Fragment defined by 4abcdef, 9c, 26c.
 Fragment referenced in 32b.

\langle *directories to create 4b* $\rangle \equiv$
`../bin` \diamond

Fragment defined by 4abcdef, 9c, 26c.
 Fragment referenced in 32b.

\langle *directories to create 4c* $\rangle \equiv$
`../modules/usrlocal` \diamond

Fragment defined by 4abcdef, 9c, 26c.
 Fragment referenced in 32b.

\langle *directories to create 4d* $\rangle \equiv$
`../modules/usrlocal/bin` \diamond

Fragment defined by 4abcdef, 9c, 26c.
 Fragment referenced in 32b.

\langle *directories to create 4e* $\rangle \equiv$
`../modules/usrlocal/lib` \diamond

Fragment defined by 4abcdef, 9c, 26c.
 Fragment referenced in 32b.

\langle *directories to create 4f* $\rangle \equiv$
`../modules/python /home/paul/dutch-nlp-modules-on-Lisa/modules/jars` \diamond

Fragment defined by 4abcdef, 9c, 26c.
 Fragment referenced in 32b.

Make Python utilities findable with the following macro:

\langle *set pythonpath 4g* $\rangle \equiv$
`export PYTHONPATH=/home/paul/dutch-nlp-modules-on-Lisa/modules/python:$PYTHONPATH`
 \diamond

Fragment referenced in 9a, 14b, 15a.

Similarly, make binaries findable:

\langle *set local bin directory 4h* $\rangle \equiv$
`export PATH=../modules/usrlocal/bin:$PATH`
 \diamond

Fragment referenced in 15a.

During installation, an extra directory, **snapshot**, that contains modules that are not yet available from public sources, is needed.

So, let us here and now check whether the snapshots are indeed present. The following macro unpacks the tarball if it is present and aborts the installation when the snapshot directory is not present.

```

<unpack snapshots or die 5a> ≡
  cd /home/paul/dutch-nlp-modules-on-Lisa
  if
    [ -e nl_pipeline_snapshots.tgz ]
  then
    tar -zxf nl_pipeline_snapshots.tgz
  fi
  if
    [ ! -e snapshots ]
  then
    echo "No module snapshots"
    exit 1
  fi
  ◇

```

Fragment referenced in 5b.

2 Installation

This section describes how the modules are obtained from their open-source and installed. This is performed by script **install-modules**

```

"../bin/install-modules" 5b≡
  #!/bin/bash
  <variables of install-modules 19d>
  <unpack snapshots or die 5a>
  <install the tokenizer 7h>
  <install kafnaparserpy 16a>
  <install Alpino 8b>
  <install the morphosyntactic parser 8h>
  <install the NERC module 10c>
  <install the WSD module 11a>
  <install the NED module 12a>
  <install the onto module 12d>
  <install the heideltime module 13c>
  <install the srl module 14d>
  <install the treetagger utility 16g, ... >
  <install the ticcutils utility 18a>
  <install the timbl utility 18b>

  ◇

  <make scripts executable 5c> ≡
    chmod 775 /home/paul/dutch-nlp-modules-on-Lisa/bin/install-modules
  ◇

```

Fragment defined by 5c, 8a, 9b, 10be, 11c, 12c, 13b, 14c, 15f, 16f.

Fragment referenced in 32c.

Installation goes as follows:

1. If the module exists already, move it to a temporary place.
2. Try to install the module from the source.
3. If that is successful, remove the old version. Otherwise, move the old version back to its original place.

The following macro's move or remove modules.

```

< move module 6a > ≡
    if
        [ -e @1 ]
    then
        mv @1 old.@1
    fi
◇

```

Fragment referenced in 7a, 8b, 20a.

```

< remove old module 6b > ≡
    rm -rf old.@1
◇

```

Fragment referenced in 7a, 8b, 20a.

```

< re-instate old module 6c > ≡
    mv old.@1 @1
    MESS="Replaced previous version of @1"
    < logmess (6d $MESS ) 19e >
◇

```

Fragment referenced in 7a, 8b, 20a.

The following macro can be used to install a module from github. It needs as parameters:

1. Name of the module.
2. Name of the root directory.
3. URL to clone from.

```

⟨ install from github 7a ⟩ ≡
MODNAM=@1
DIRN=@2
GITU=@3
⟨ find leave and tree 7g ⟩
⟨ logmess (7b "TREE: $TREE; LEAVE: $LEAVE" ) 19e ⟩
cd $TREE
⟨ move module (7c $LEAVE ) 6a ⟩
git clone $GITU
if
[ $? -gt 0 ]
then
⟨ logmess (7d Cannot install current $MODNAM version ) 19e ⟩
⟨ re-instate old module (7e $LEAVE ) 6c ⟩
else
⟨ remove old module (7f $LEAVE ) 6b ⟩
fi

◇

```

Fragment referenced in 7h, 8h, 13c, 14d, 16a.

Note: Par. 1: Directory; par 2: path to directory; par 3: directory name.

```

⟨ find leave and tree 7g ⟩ ≡
FULLDIR=/home/paul/dutch-nlp-modules-on-Lisa/modules/$DIRN
LEAVE=${FULLDIR##*/}
TREE=${FULLDIR%$LEAVE}

◇

```

Fragment referenced in 7a.

2.1 Install tokenizer

2.1.1 Module

```

⟨ install the tokenizer 7h ⟩ ≡

```

```

    ⟨ install from github (7i tokenizer,7j tokenizer-base,7k https://github.com/opener-project/tokenizer-base.git ) 19e ⟩
◇

```

Fragment referenced in 5b.

2.1.2 Script

The script just runs the tokenizerscript in Perl.

```

"../bin/tok" 7l ≡
#!/bin/bash
ROOT=/home/paul/dutch-nlp-modules-on-Lisa
TOKBINDIR=/home/paul/dutch-nlp-modules-on-Lisa/modules/tokenizer-base/core
cat | perl $TOKBINDIR/tokenizer-cli.pl -l nl t

◇

```

```

< make scripts executable 8a > ≡
    chmod 775 /home/paul/dutch-nlp-modules-on-Lisa/bin/tok
    ◇

```

Fragment defined by 5c, 8a, 9b, 10be, 11c, 12c, 13b, 14c, 15f, 16f.

Fragment referenced in 32c.

2.2 Install Alpino

Install Alpino from the website of Gertjan van Noort.

2.2.1 Module

```

< install Alpino 8b > ≡
    SUCCES=0
    cd /home/paul/dutch-nlp-modules-on-Lisa/modules
    < move module (8c Alpino ) 6a >
    wget http://www.let.rug.nl/vannoord/alp/Alpino/binary/versions/Alpino-x86_64-linux-glibc2.5-20548-sicstus.tar.gz
    SUCCES=$?
    if
        [ $SUCCES -eq 0 ]
    then
        tar -xzf Alpino-x86_64-linux-glibc2.5-20548-sicstus.tar.gz
        SUCCES=$?
        rm -rf Alpino-x86_64-linux-glibc2.5-20548-sicstus.tar.gz
    fi
    if
        [ $SUCCES -eq 0 ]
    then
        < logmess (8d Installed Alpino ) 19e >
        < remove old module (8e Alpino ) 6b >
    else
        < re-instate old module (8f Alpino ) 6c >
    fi
    ◇

```

Fragment referenced in 5b.

Currently, alpino is not used as a pipeline-module on its own, but it is included in other pipeline-modules. Modules that use Alpino should set the following variables:

```

< set alpinohome 8g > ≡
    export ALPINO_HOME=/home/paul/dutch-nlp-modules-on-Lisa/modules/Alpino
    ◇

```

Fragment referenced in 9a.

Defines: ALPINO_HOME Never used.

2.3 Morphosyntactic parser

2.3.1 Module

```

< install the morphosyntactic parser 8h > ≡

    < install from github (8i morphsynparser,8j morphosyntactic_parser_nl,8k https://github.com/cltl/morphosyntactic_parser ) 8l >
    ◇

```

Fragment referenced in 5b.

2.3.2 Script

```
"../bin/mor" 9a≡
  #!/bin/bash
  ROOT=/home/paul/dutch-nlp-modules-on-Lisa
  MODDIR=/home/paul/dutch-nlp-modules-on-Lisa/modules/morphosyntactic_parser_nl
  < set alpinohome 8g >
  < set pythonpath 4g >
  cat | python $MODDIR/core/morph_syn_parser.py
◇
```

```
< make scripts executable 9b > ≡
  chmod 775 /home/paul/dutch-nlp-modules-on-Lisa/bin/mor
◇
```

Fragment defined by 5c, 8a, 9b, 10be, 11c, 12c, 13b, 14c, 15f, 16f.

Fragment referenced in 32c.

2.4 Alpino hack

Install a hack that removes output from Alpino that cannot be interpreted by following modules. It is just a small python script.

2.4.1 Module

```
< directories to create 9c > ≡
  /home/paul/dutch-nlp-modules-on-Lisa/modules/alpinohack ◇
```

Fragment defined by 4abcdef, 9c, 26c.

Fragment referenced in 32b.

```
"../modules/alpinohack/clean_hack.py" 9d≡
  #!/usr/bin/python
  import sys

  input = sys.stdin

  output = ''

  for line in input:
    line = line.replace('--', '#')
    line = line.replace('--"', '#"'')
    output += line

  print output
◇
```

Uses: print 26a.

2.4.2 Script

```
"../bin/alpinohack" 10a≡
  #!/bin/bash
  ROOT=/home/paul/dutch-nlp-modules-on-Lisa
  HACKDIR=/home/paul/dutch-nlp-modules-on-Lisa/modules/alpinohack
  cat | python $HACKDIR/clean_hack.py
  ◇
```

```
< make scripts executable 10b > ≡
  chmod 775 /home/paul/dutch-nlp-modules-on-Lisa/bin/alpinohack
  ◇
```

Fragment defined by 5c, 8a, 9b, 10be, 11c, 12c, 13b, 14c, 15f, 16f.
 Fragment referenced in 32c.

2.5 Named entity recognition (NERC)

2.5.1 Module

We do not (yet) have the source code of the NER module. A snapshot is comprised in a jar library.

```
< install the NERC module 10c > ≡
  cp /home/paul/dutch-nlp-modules-on-Lisa/snapshots/nerc/ixa-pipe-nerc-1.1.0.jar /home/paul/dutch-nlp-
  ◇
```

Fragment referenced in 5b.

2.5.2 Script

```
"../bin/nerc" 10d≡
  #!/bin/bash
  ROOT=/home/paul/dutch-nlp-modules-on-Lisa
  JARDIR=/home/paul/dutch-nlp-modules-on-Lisa/modules/jars
  cat | java -jar $JARDIR/ixa-pipe-nerc-1.1.0.jar tag
  ◇
```

```
< make scripts executable 10e > ≡
  chmod 775 /home/paul/dutch-nlp-modules-on-Lisa/bin/nerc
  ◇
```

Fragment defined by 5c, 8a, 9b, 10be, 11c, 12c, 13b, 14c, 15f, 16f.
 Fragment referenced in 32c.

2.6 Wordsense-disambiguation

We do not yet have a source-repository of the wsd module. Therefore, install from a snapshot on Lisa.

2.6.1 Module

$\langle \text{install the WSD module 11a} \rangle \equiv$

```
cp -r /home/paul/dutch-nlp-modules-on-Lisa/snapshots/wsd /home/paul/dutch-nlp-modules-on-Lisa/modules
◇
```

Fragment referenced in 5b.

2.6.2 Script

```
"../bin/wsd" 11b≡
#!/bin/bash
# WSD -- wrapper for word-sense disambiguation
# 8 Jan 2014 Ruben Izquierdo
# 16 sep 2014 Paul Huygen
ROOT=/home/paul/dutch-nlp-modules-on-Lisa
WSDDIR=/home/paul/dutch-nlp-modules-on-Lisa/modules/wsd
WSDSCRIPT=kaf_annotate_senses.pl
UKB=$WSDDIR/ukb_wsd_2.0
POSMAP=$WSDDIR/posmap.NGV.txt

if [ "$1" = "nl" ]
then
    GRAPH=$WSDDIR/cdb2.0-nld-all.infv.0.0.no-allwords.bin
    DICT=$WSDDIR/dictionary
else
    GRAPH=$WSDDIR/wn30g_eng.v20.bin
    DICT=$WSDDIR/wn30_eng_dict.txt
fi

iconv -t utf-8//IGNORE | $WSDDIR/$WSDSCRIPT -x $UKB -M $GRAPH -W $DICT -m $POSMAP
◇
```

Uses: all 22a.

$\langle \text{make scripts executable 11c} \rangle \equiv$

```
chmod 775 /home/paul/dutch-nlp-modules-on-Lisa/bin/wsd
◇
```

Fragment defined by 5c, 8a, 9b, 10be, 11c, 12c, 13b, 14c, 15f, 16f.

Fragment referenced in 32c.

2.7 NED

The NED module wants to consult the dbpedia spotlight server, so that one has to be installed somewhere. For this moment, let us suppose that it has been installed on localhost.

2.7.1 Installation of the spotlight server

2.7.2 Module

⟨ install the NED module 12a ⟩ ≡

```
cp /home/paul/dutch-nlp-modules-on-Lisa/snapshots/ned/ixa-pipe-ned-1.0.jar /home/paul/dutch-nlp-modul
mkdir -p /home/paul/dutch-nlp-modules-on-Lisa/modules/ned
cd /home/paul/dutch-nlp-modules-on-Lisa/modules/ned
wget http://ixa2.si.ehu.es/ixa-pipes/models/wikipedia-db.v1.tar.gz
tar -xzf wikipedia-db.v1.tar.gz
◇
```

Fragment referenced in 5b.

2.7.3 Script

```
"../bin/ned" 12b≡
#!/bin/bash
ROOT=/home/paul/dutch-nlp-modules-on-Lisa
JARDIR=/home/paul/dutch-nlp-modules-on-Lisa/modules/jars
cat | java -jar $JARDIR/ixa-pipe-ned-1.0.jar -p 2060 -e candidates -i /home/paul/dutch-nlp-modules-o
◇
```

⟨ make scripts executable 12c ⟩ ≡

```
chmod 775 /home/paul/dutch-nlp-modules-on-Lisa/bin/ned
◇
```

Fragment defined by 5c, 8a, 9b, 10be, 11c, 12c, 13b, 14c, 15f, 16f.

Fragment referenced in 32c.

2.8 Ontotagger

We do not yet have a source-repository of the Ontotagger module. Therefore, install from a snapshot on Lisa.

2.8.1 Module

⟨ install the onto module 12d ⟩ ≡

```
cp -r /home/paul/dutch-nlp-modules-on-Lisa/snapshots/ontotagger /home/paul/dutch-nlp-modules-on-Lisa/
◇
```

Fragment referenced in 5b.

2.8.2 Script

```

"../bin/onto" 13a≡
#!/bin/bash
ROOT=/home/paul/dutch-nlp-modules-on-Lisa
ONTODIR=/home/paul/dutch-nlp-modules-on-Lisa/modules/ontotagger
JARDIR=$ONTODIR/lib
RESOURCESDIR=$ONTODIR/resources

2.10 Semantic Role labelling

2.10.1 Module

```

< install the srl module 14d > ≡
< install from github (14e srl,14f vua-srl-nl,14g https://github.com/newsreader/vua-srl-nl.git ) 7a >
◇

```

Fragment referenced in 5b.

2.10.2 Script

First:

1. set the correct environment. The module needs python and timble.
2. create a tempdir and in that dir a file to store the input and a (SCV) file with the feature-vector.

```

"../bin/srl" 15a≡
    #!/bin/bash
    ROOT=/home/paul/dutch-nlp-modules-on-Lisa
    SRLDIR=/home/paul/dutch-nlp-modules-on-Lisa/modules/vua-srl-nl
    TEMPDIR='mktemp -d -t SRLTMP.XXXXXX'
    cd $SRLDIR
    < set local bin directory 4h >
    < set pythonpath 4g >
    INPUTFILE=$TEMPDIR/inputfile
    FEATUREVECTOR=$TEMPDIR/csvfile
    TIMBLOUTPUTFILE=$TEMPDIR/timblpredictions
    ◇

```

File defined by 15abcde.

Create a feature-vector.

```

"../bin/srl" 15b≡
    cat | tee $INPUTFILE | python nafAlpinoToSRLFeatures.py > $FEATUREVECTOR
    ◇

```

File defined by 15abcde.

Run the trained model on the feature-vector.

```

"../bin/srl" 15c≡

    timbl -m0:I1,2,3,4 -i e-mags_mags_press_newspapers.wgt -t $FEATUREVECTOR -o $TIMBLOUTPUTFILE >/dev/nu
    ◇

```

File defined by 15abcde.

Insert the SRL values into the NAF file.

```

"../bin/srl" 15d≡
    python timblToAlpinoNAF.py $INPUTFILE $TIMBLOUTPUTFILE
    ◇

```

File defined by 15abcde.

Clean up.

```

"../bin/srl" 15e≡
    rm -rf $TEMPDIR
    ◇

```

File defined by 15abcde.

```

< make scripts executable 15f > ≡
    chmod 775 /home/paul/dutch-nlp-modules-on-Lisa/bin/srl
    ◇

```

Fragment defined by 5c, 8a, 9b, 10be, 11c, 12c, 13b, 14c, 15f, 16f.

Fragment referenced in 32c.

2.11 KafNafParserPy

Several modules use KafNafParserpy to read and write NAF files.

2.11.1 Module

$\langle \text{install kafnafparserpy } 16a \rangle \equiv$

```
 $\langle \text{install from github } (16b \text{ kafnafparserpy}, 16c \text{ python/KafNafParserPy}, 16d \text{ https://github.com/cltl/KafNafParserPy}) \equiv$ 
```

Fragment referenced in 5b.

3 Utilities

3.1 Test script

The following script pushes a single sentence through the modules of the pipeline.

```
"../bin/test" 16e≡
#!/bin/bash
ROOT=/home/paul/dutch-nlp-modules-on-Lisa
BIND=$ROOT/bin
echo "De hond eet jus." | $BIND/tok | $BIND/mor | \
$BIND/alpinohack | $BIND/nerc | $BIND/wsd | \
$BIND/onto > $ROOT/test.onto
cat $ROOT/test.onto | $BIND/heideltime > $ROOT/test.heidel
cat $ROOT/test.heidel | $BIND/srl > $ROOT/test.srl
cat $ROOT/test.srl | $BIND/srl > $ROOT/test.srl
◇
```

$\langle \text{make scripts executable } 16f \rangle \equiv$

```
chmod 775 /home/paul/dutch-nlp-modules-on-Lisa/bin/test
◇
```

Fragment defined by 5c, 8a, 9b, 10be, 11c, 12c, 13b, 14c, 15f, 16f.

Fragment referenced in 32c.

3.2 Treetagger

3.2.1 Module

Installation goes as follows (See [Treetagger's homepage](#):

1. Download and unpack the treetagger tarball. This generates the subdirectories `bin`, `cmd` and `doc`
2. Download and unpack the tagger-scripts tarball

The location where treetagger comes from and the location where it is going to reside:

```
 $\langle \text{install the treetagger utility } 16g \rangle \equiv$ 
TREETAGDIR=treetagger
TREETAG_BASIS_URL=http://www.cis.uni-muenchen.de/%7Eschmid/tools/TreeTagger/data/
TREETAGURL=http://www.cis.uni-muenchen.de/%7Eschmid/tools/TreeTagger/data/
◇
```

Fragment defined by 16g, 17abcde.

Fragment referenced in 5b.

The source tarball, scripts and the installation-script:

```

⟨ install the treetagger utility 17a ⟩ ≡
    TREETAGSRC=tree-tagger-linux-3.2.tar.gz
    TREETAGSCRIPTS=tagger-scripts.tar.gz
    TREETAG_INSTALLSCRIPT=install-tagger.sh
    ◇

```

Fragment defined by 16g, 17abcde.

Fragment referenced in 5b.

Parametersets:

```

⟨ install the treetagger utility 17b ⟩ ≡
    DUTCHPARS_UTF_GZ=dutch-par-linux-3.2-utf8.bin.gz
    DUTCH_TAGSET=dutch-tagset.txt
    DUTCHPARS_2_GZ=dutch2-par-linux-3.2-utf8.bin.gz
    ◇

```

Fragment defined by 16g, 17abcde.

Fragment referenced in 5b.

Download everything in the target directory:

```

⟨ install the treetagger utility 17c ⟩ ≡
    mkdir -p /home/paul/dutch-nlp-modules-on-Lisa/modules/$TREETAGDIR
    cd /home/paul/dutch-nlp-modules-on-Lisa/modules/$TREETAGDIR
    wget $TREETAGURL/$TREETAGSRC
    wget $TREETAGURL/$TREETAGSCRIPTS
    wget $TREETAGURL/$TREETAG_INSTALLSCRIPT
    wget $TREETAGURL/$DUTCHPARS_UTF_GZ
    wget $TREETAGURL/$DUTCH_TAGSET
    wget $TREETAGURL/$DUTCHPARS_2_GZ
    ◇

```

Fragment defined by 16g, 17abcde.

Fragment referenced in 5b.

Run the install-script:

```

⟨ install the treetagger utility 17d ⟩ ≡
    chmod 775 $TREETAG_INSTALLSCRIPT
    ./$TREETAG_INSTALLSCRIPT
    ◇

```

Fragment defined by 16g, 17abcde.

Fragment referenced in 5b.

Remove the tarballs:

```

⟨ install the treetagger utility 17e ⟩ ≡
    rm $TREETAGSRC
    rm $TREETAGSCRIPTS
    rm $TREETAG_INSTALLSCRIPT
    rm $DUTCHPARS_UTF_GZ
    rm $DUTCH_TAGSET
    rm $DUTCHPARS_2_GZ
    ◇

```

Fragment defined by 16g, 17abcde.

Fragment referenced in 5b.

3.3 Timbl and ticcutils

3.3.1 Module

Timbl and ticcutils are installed from their source-tarballs. The installation is not (yet?) completely reproducibe because it uses the currently available c-compiler. Installation involves:

1. Download the tarball in a temporary directory.
2. Unpack the tarball.
3. cd to the unpacked directory and perform `./configure`, `make` and `make install`. Note the argument that causes the files to be installed in the `usrlocal` subdirectory of the modules directory.

```

< install the ticcutils utility 18a > ≡
  URL=http://software.ticc.uvt.nl/ticcutils-0.7.tar.gz
  TARB=ticcutils-0.7.tar.gz
  DIR=ticcutils-0.7
  < unpack ticcutils or timbl 19a >
  ◇

```

Fragment referenced in 5b.

```

< install the timbl utility 18b > ≡
  URL=http://software.ticc.uvt.nl/timbl-6.4.6.tar.gz
  TARB=timbl-6.4.6.tar.gz
  DIR=timbl-6.4.6
  < unpack ticcutils or timbl 19a >
  ◇

```

Fragment referenced in 5b.

```

<unpack ticcutils or timbl 19a> ≡
    SUCCES=0
    ticbeldir='mktemp -t -d tickbel.XXXXXX'
    cd $ticbeldir
    wget $URL
    SUCCES=$?
    if
        [ $SUCCES -eq 0 ]
    then
        tar -xzf $TARB
        SUCCES=$?
        rm -rf $TARB
    fi
    if
        [ $SUCCES -eq 0 ]
    then
        cd $DIR
        ./configure --prefix=../modules/usrlocal
        make
        make install
    fi
    cd /home/paul/dutch-nlp-modules-on-Lisa
    rm -rf $ticbeldir
    if
        [ $SUCCES -eq 0 ]
    then
        <logmess (19b Installed $DIR ) 19e>
    else
        <logmess (19c NOT installed $DIR ) 19e>
    fi
    ◇

```

Fragment referenced in 18ab.

3.4 Logging

Write log messages to standard out if variable LOGLEVEL is equal to 1.

```

<variables of install-modules 19d> ≡
    LOGLEVEL=1
    ◇

```

Fragment referenced in 5b.

```

<logmess 19e> ≡
    if
        [ $LOGLEVEL -gt 0 ]
    then
        echo @1
    fi
    ◇

```

Fragment referenced in 6c, 7a, 8b, 19a, 20a.

3.5 Misc

Install a module from a tarball: The macro expects the following three variables to be present:

URL: The URL tfrom where the taball can be downloaded.

TARB: The name of the tarball.

DIR; Name of the directory for the module.

Arg 1: URL; Arg 2: tarball; Arg 3: directory.

```

< install from tarball 20a > ≡
  SUCCES=0
  cd /home/paul/dutch-nlp-modules-on-Lisa/modules
  < move module (20b $DIR ) 6a >
  wget $URL
  SUCCES=$?
  if
    [ $SUCCES -eq 0 ]
  then
    tar -xzf $TARB
    SUCCES=$?
    rm -rf $TARB
  fi
  if
    [ $SUCCES -eq 0 ]
  then
    < logmess (20c Installed $DIR ) 19e >
    < remove old module (20d $DIR ) 6b >
  else
    < re-instate old module (20e $DIR ) 6c >
  fi
  ◇

```

Fragment never referenced.

A How to read and translate this document

This document is an example of *literate programming* [?]. It contains the code of all sorts of scripts and programs, combined with explaining texts. In this document the literate programming tool **nuweb** is used, that is currently available from Sourceforge (URL:nuweb.sourceforge.net). The advantages of Nuweb are, that it can be used for every programming language and scripting language, that it can contain multiple program sources and that it is very simple.

A.1 Read this document

The document contains *code scraps* that are collected into output files. An output file (e.g. `output.fil`) shows up in the text as follows:

```

"output.fil" 4a ≡
  # output.fil
  < a macro 4b >
  < another macro 4c >
  ◇

```

The above construction contains text for the file. It is labelled with a code (in this case 4a) The constructions between the < and > brackets are macro's, placeholders for texts that can be found in other places of the document. The test for a macro is found in constructions that look like:

< a macro 4b > ≡

This is a scrap of code inside the macro.
It is concatenated with other scraps inside the
macro. The concatenated scraps replace
the invocation of the macro.

Macro defined by 4b, 87e

Macro referenced in 4a

Macro's can be defined on different places. They can contain other macro's.

< a scrap 87e > ≡

This is another scrap in the macro. It is
concatenated to the text of scrap 4b.
This scrap contains another macro:
< another macro 45b >

Macro defined by 4b, 87e

Macro referenced in 4a

A.2 Process the document

The raw document is named `a_dutch-nlp-modules-on-Lisa.w`. Figure 1 shows pathways to

Figure 1: Translation of the raw code of this document into printable/viewable documents and into program sources. The figure shows the pathways and the main files involved.

translate it into printable/viewable documents and to extract the program sources. Table 4 lists

Tool	Source	Description
gawk	www.gnu.org/software/gawk/	text-processing scripting language
M4	www.gnu.org/software/m4/	Gnu macro processor
nuweb	nuweb.sourceforge.net	Literate programming tool
tex	www.ctan.org	Typesetting system
tex4ht	www.ctan.org	Convert \TeX documents into xml/html

Table 4: Tools to translate this document into readable code and to extract the program sources

the tools that are needed for a translation. Most of the tools (except Nuweb) are available on a well-equipped Linux system.

A.3 Translate and run

This chapter assembles the Makefile for this project.

```
"Makefile" 21≡
  < default target 22a >

  < parameters in Makefile 22c, ... >

  < impliciete make regels 25a, ... >
  < expliciete make regels 22e, ... >
  < make targets 26a, ... >
  ◇
```

The default target of make is `all`.

```

< default target 22a > ≡
    all : < all targets 22b >
    .PHONY : all

```

◇

Fragment referenced in 21.
 Defines: all 11b, PHONY 25b.

One of the targets is certainly the PDF version of this document.

```

< all targets 22b > ≡
    dutch-nlp-modules-on-Lisa.pdf◇

```

Fragment referenced in 22a.
 Uses: pdf 26a.

We use many suffixes that were not known by the C-programmers who constructed the `make` utility. Add these suffixes to the list.

```

< parameters in Makefile 22c > ≡
    .SUFFIXES: .pdf .w .tex .html .aux .log .php

```

◇

Fragment defined by 22cd, 24ab, 26d, 29b, 32a.
 Fragment referenced in 21.
 Defines: SUFFIXES Never used.
 Uses: pdf 26a.

A.4 Get Nuweb

An annoying problem is, that this program uses nuweb, a utility that is seldom installed on a computer. Therefore, we are going to install that first if it is not present. Unfortunately, nuweb is hosted on sourceforge and it is difficult to achieve automatic downloading from that repository. Therefore I copied one of the versions on a location from where it can be downloaded with a script.

```

< parameters in Makefile 22d > ≡
    NUWEB=../bin/nuweb

```

◇

Fragment defined by 22cd, 24ab, 26d, 29b, 32a.
 Fragment referenced in 21.
 Defines: NUWEB 22e, 27abc, 28b, 30c, 31c, 32c.
 Uses: nuweb 28b.

```

< expliciete make regels 22e > ≡
    $(NUWEB): m4_arojroot/nuweb-1.58
    cd ../nuweb-1.58 && make nuweb
    cp ../nuweb-1.58/nuweb $(NUWEB)

```

◇

Fragment defined by 22e, 23abc, 25b, 27a, 29de, 30ab.
 Fragment referenced in 21.
 Uses: NUWEB 22d, nuweb 28b.

```

⟨ expliciete make regels 23a ⟩ ≡
  ../nuweb-1.58:
    cd .. && wget http://kyoto.let.vu.nl/~huygen/nuweb-1.58.tgz
    cd .. && tar -xzf nuweb-1.58.tgz

```

◇

Fragment defined by 22e, 23abc, 25b, 27a, 29de, 30ab.

Fragment referenced in 21.

Uses: nuweb 28b.

A.5 Pre-processing

To make usable things from the raw input `a_dutch-nlp-modules-on-Lisa.w`, do the following:

1. Process \$ characters.
2. Run the m4 pre-processor.
3. Run nuweb.

This results in a L^AT_EX file, that can be converted into a PDF or a HTML document, and in the program sources and scripts.

A.5.1 Process ‘dollar’ characters

Many “intelligent” T_EX editors (e.g. the auctex utility of Emacs) handle \$ characters as special, to switch into mathematics mode. This is irritating in program texts, that often contain \$ characters as well. Therefore, we make a stub, that translates the two-character sequence \ \$ into the single \$ character.

```

⟨ expliciete make regels 23b ⟩ ≡
  m4_dutch-nlp-modules-on-Lisa.w : a_dutch-nlp-modules-on-Lisa.w
  gawk '{if(match($$, "@%")) {printf("%s", substr($$,1,RSTART-1))} else print}' a_dutch-nlp-m
  | gawk '{gsub(/[\$]/, "$$");print}' > m4_dutch-nlp-modules-on-Lisa.w

```

◇

Fragment defined by 22e, 23abc, 25b, 27a, 29de, 30ab.

Fragment referenced in 21.

Uses: print 26a.

A.5.2 Run the M4 pre-processor

```

⟨ expliciete make regels 23c ⟩ ≡
  dutch-nlp-modules-on-Lisa.w : m4_dutch-nlp-modules-on-Lisa.w inst.m4
  m4 -P m4_dutch-nlp-modules-on-Lisa.w > dutch-nlp-modules-on-Lisa.w

```

◇

Fragment defined by 22e, 23abc, 25b, 27a, 29de, 30ab.

Fragment referenced in 21.

A.6 Typeset this document

Enable the following:

1. Create a PDF document.
2. Print the typeset document.

3. View the typeset document with a viewer.
4. Create a HTMLdocument.

In the three items, a typeset PDF document is required or it is the requirement itself.

A.6.1 Figures

This document contains figures that have been made by `xfig`. Post-process the figures to enable inclusion in this document.

The list of figures to be included:

```
<parameters in Makefile 24a> ≡
    FIGFILES=fileschema
```

◇

Fragment defined by 22cd, 24ab, 26d, 29b, 32a.

Fragment referenced in 21.

Defines: FIGFILES 24b, 29b.

We use the package `figlatex` to include the pictures. This package expects two files with extensions `.pdftex` and `.pdftex_t` for `pdflatex` and two files with extensions `.pstex` and `.pstex_t` for the `latex/dvips` combination. Probably `tex4ht` uses the latter two formats too.

Make lists of the graphical files that have to be present for `latex/pdflatex`:

```
<parameters in Makefile 24b> ≡
    FIGFILENAMES=$(foreach fil,$(FIGFILES), $(fil).fig)
    PDFT_NAMES=$(foreach fil,$(FIGFILES), $(fil).pdftex_t)
    PDF_FIG_NAMES=$(foreach fil,$(FIGFILES), $(fil).pdftex)
    PST_NAMES=$(foreach fil,$(FIGFILES), $(fil).pstex_t)
    PS_FIG_NAMES=$(foreach fil,$(FIGFILES), $(fil).pstex)
```

◇

Fragment defined by 22cd, 24ab, 26d, 29b, 32a.

Fragment referenced in 21.

Defines: FIGFILENAMES Never used, PDFT_NAMES 26b, PDF_FIG_NAMES 26b, PST_NAMES Never used,
PS_FIG_NAMES Never used.

Uses: FIGFILES 24a.

Create the graph files with program `fig2dev`:

```

< impliciete make regels 25a > ≡
    %.eps: %.fig
        fig2dev -L eps $< > $@

    %.pstex: %.fig
        fig2dev -L pstex $< > $@

    .PRECIOUS : %.pstex
    %.pstex_t: %.fig %.pstex
        fig2dev -L pstex_t -p $*.pstex $< > $@

    %.pdftex: %.fig
        fig2dev -L pdftex $< > $@

    .PRECIOUS : %.pdftex
    %.pdftex_t: %.fig %.pstex
        fig2dev -L pdftex_t -p $*.pdftex $< > $@

```

◇

Fragment defined by 25a, 26b, 29c.

Fragment referenced in 21.

Defines: fig2dev Never used.

A.6.2 Bibliography

To keep this document portable, create a portable bibliography file. It works as follows: This document refers in the |bibliography| statement to the local bib-file `dutch-nlp-modules-on-Lisa.bib`. To create this file, copy the auxiliary file to another file `auxfil.aux`, but replace the argument of the command `\bibdata{dutch-nlp-modules-on-Lisa}` to the names of the bibliography files that contain the actual references (they should exist on the computer on which you try this). This procedure should only be performed on the computer of the author. Therefore, it is dependent of a binary file on his computer.

```

< expliciete make regels 25b > ≡
    bibfile : dutch-nlp-modules-on-Lisa.aux /home/paul/bin/mkportbib
        /home/paul/bin/mkportbib dutch-nlp-modules-on-Lisa litprog

    .PHONY : bibfile

```

◇

Fragment defined by 22e, 23abc, 25b, 27a, 29de, 30ab.

Fragment referenced in 21.

Uses: PHONY 22a.

A.6.3 Create a printable/viewable document

Make a PDF document for printing and viewing.

```

< make targets 26a > ≡
pdf : dutch-nlp-modules-on-Lisa.pdf

print : dutch-nlp-modules-on-Lisa.pdf
      lpr dutch-nlp-modules-on-Lisa.pdf

view : dutch-nlp-modules-on-Lisa.pdf
      evince dutch-nlp-modules-on-Lisa.pdf

```

◇

Fragment defined by 26a, 29a, 32bc.

Fragment referenced in 21.

Defines: pdf 22bc, 26b, print 9d, 14a, 23b, view Never used.

Create the PDF document. This may involve multiple runs of nuweb, the L^AT_EX processor and the bibT_EX processor, and depends on the state of the aux file that the L^AT_EX processor creates as a by-product. Therefore, this is performed in a separate script, w2pdf.

The w2pdf script The three processors nuweb, L^AT_EX and bibT_EX are intertwined. L^AT_EX and bibT_EX create parameters or change the value of parameters, and write them in an auxiliary file. The other processors may need those values to produce the correct output. The L^AT_EX processor may even need the parameters in a second run. Therefore, consider the creation of the (PDF) document finished when none of the processors causes the auxiliary file to change. This is performed by a shell script w2pdf.

Note, that in the following make construct, the implicit rule .w.pdf is not used. It turned out, that make did not calculate the dependencies correctly when I did use this rule.

```

< impliciete make regels 26b > ≡
%.pdf : %.w $(W2PDF) $(PDF_FIG_NAMES) $(PDFT_NAMES)
      chmod 775 $(W2PDF)
      $(W2PDF) $*

```

◇

Fragment defined by 25a, 26b, 29c.

Fragment referenced in 21.

Uses: pdf 26a, PDFT_NAMES 24b, PDF_FIG_NAMES 24b.

The following is an ugly fix of an unsolved problem. Currently I develop this thing, while it resides on a remote computer that is connected via the sshfs filesystem. On my home computer I cannot run executables on this system, but on my work-computer I can. Therefore, place the following script on a local directory.

```

< directories to create 26c > ≡
../nuweb/bin ◇

```

Fragment defined by 4abcdef, 9c, 26c.

Fragment referenced in 32b.

Uses: nuweb 28b.

```

< parameters in Makefile 26d > ≡
W2PDF=../nuweb/bin/w2pdf

```

◇

Fragment defined by 22cd, 24ab, 26d, 29b, 32a.

Fragment referenced in 21.

Uses: nuweb 28b.

```

⟨ expliciete make regels 27a ⟩ ≡
    $(W2PDF) : dutch-nlp-modules-on-Lisa.w $(NUWEB)
              $(NUWEB) dutch-nlp-modules-on-Lisa.w
    ◇

```

Fragment defined by 22e, 23abc, 25b, 27a, 29de, 30ab.
 Fragment referenced in 21.
 Uses: NUWEB 22d.

```

"../nuweb/bin/w2pdf" 27b≡
    #!/bin/bash
    # w2pdf -- compile a nuweb file
    # usage: w2pdf [filename]
    # 20141103 at 0926h: Generated by nuweb from a_dutch-nlp-modules-on-Lisa.w
    NUWEB=/usr/local/bin/nuweb

    LATEXCOMPILER=pdflatex
    ⟨ filenames in nuweb compile script 27d ⟩
    ⟨ compile nuweb 27c ⟩
    ◇

```

Uses: NUWEB 22d, nuweb 28b.

The script retains a copy of the latest version of the auxiliary file. Then it runs the four processors nuweb, L^AT_EX, MakeIndex and bibT_EX, until they do not change the auxiliary file or the index.

```

⟨ compile nuweb 27c ⟩ ≡
    NUWEB=/usr/local/bin/nuweb

    ⟨ run the processors until the aux file remains unchanged 28c ⟩
    ⟨ remove the copy of the aux file 28a ⟩
    ◇

```

Fragment referenced in 27b.
 Uses: NUWEB 22d, nuweb 28b.

The user provides the name of the nuweb file as argument. Strip the extension (e.g. .w) from the filename and create the names of the L^AT_EX file (ends with .tex), the auxiliary file (ends with .aux) and the copy of the auxiliary file (add old. as a prefix to the auxiliary filename).

```

⟨ filenames in nuweb compile script 27d ⟩ ≡
    nufil=$1
    trunk=${1%.*}
    texfil=${trunk}.tex
    auxfil=${trunk}.aux
    oldaux=old.${trunk}.aux
    indexfil=${trunk}.idx
    oldindexfil=old.${trunk}.idx
    ◇

```

Fragment referenced in 27b.
 Defines: auxfil 28c, 31ab, indexfil 28c, 31a, nufil 28b, 31ac, oldaux 28ac, 31ab, oldindexfil 28c, 31a, texfil 28b, 31ac, trunk 28b, 31acd.

Remove the old copy if it is no longer needed.

```

⟨ remove the copy of the aux file 28a ⟩ ≡
    rm $oldaux
    ◇

```

Fragment referenced in 27c, 30d.
 Uses: oldaux 27d, 31a.

Run the three processors. Do not use the option -o (to suppress generation of program sources) for nuweb, because w2pdf must be kept up to date as well.

```

⟨ run the three processors 28b ⟩ ≡
    $NUWEB $nufil
    $LATEXCOMPILER $texfil
    makeindex $trunk
    bibtex $trunk
    ◇

```

Fragment referenced in 28c.
 Defines: bibtex 31cd, makeindex 31cd, nuweb 22de, 23a, 26cd, 27bc, 29a, 30bc.
 Uses: nufil 27d, 31a, NUWEB 22d, texfil 27d, 31a, trunk 27d, 31a.

Repeat to copy the auxiliary file and the index file and run the processors until the auxiliary file and the index file are equal to their copies. However, since I have not yet been able to test the aux file and the idx in the same test statement, currently only the aux file is tested.

It turns out, that sometimes a strange loop occurs in which the aux file will keep to change. Therefore, with a counter we prevent the loop to occur more than 10 times.

```

⟨ run the processors until the aux file remains unchanged 28c ⟩ ≡
    LOOPCOUNTER=0
    while
        ! cmp -s $auxfil $oldaux
    do
        if [ -e $auxfil ]
        then
            cp $auxfil $oldaux
        fi
        if [ -e $indexfil ]
        then
            cp $indexfil $oldindexfil
        fi
        ⟨ run the three processors 28b ⟩
        if [ $LOOPCOUNTER -ge 10 ]
        then
            cp $auxfil $oldaux
        fi;
    done
    ◇

```

Fragment referenced in 27c.
 Uses: auxfil 27d, 31a, indexfil 27d, oldaux 27d, 31a, oldindexfil 27d.

A.6.4 Create HTML files

HTML is easier to read on-line than a PDF document that was made for printing. We use **tex4ht** to generate HTML code. An advantage of this system is, that we can include figures in the same way as we do for **pdflatex**.

Nuweb creates a \LaTeX file that is suitable for `latex2html` if the source file has `.hw` as suffix instead of `.w`. However, this feature is not compatible with `tex4ht`.

Make html file:

```
< make targets 29a > ≡
    html : ../nuweb/html/dutch-nlp-modules-on-Lisa.html
```

◇

Fragment defined by 26a, 29a, 32bc.

Fragment referenced in 21.

Uses: nuweb 28b.

The HTML file depends on its source file and the graphics files.

Make lists of the graphics files and copy them.

```
< parameters in Makefile 29b > ≡
    HTML_PS_FIG_NAMES=$(foreach fil,$(FIGFILES), m4_htmldocdir/$(fil).pstex)
    HTML_PST_NAMES=$(foreach fil,$(FIGFILES), m4_htmldocdir/$(fil).pstex_t)
```

◇

Fragment defined by 22cd, 24ab, 26d, 29b, 32a.

Fragment referenced in 21.

Uses: FIGFILES 24a.

```
< impliciete make regels 29c > ≡
    m4_htmldocdir/%.pstex : %.pstex
        cp $< $@

    m4_htmldocdir/%.pstex_t : %.pstex_t
        cp $< $@
```

◇

Fragment defined by 25a, 26b, 29c.

Fragment referenced in 21.

Copy the nuweb file into the html directory.

```
< expliciete make regels 29d > ≡
    m4_htmlsource : dutch-nlp-modules-on-Lisa.w
        cp dutch-nlp-modules-on-Lisa.w m4_htmlsource
```

◇

Fragment defined by 22e, 23abc, 25b, 27a, 29de, 30ab.

Fragment referenced in 21.

We also need a file with the same name as the documentstyle and suffix `.4ht`. Just copy the file `report.4ht` from the `tex4ht` distribution. Currently this seems to work.

```
< expliciete make regels 29e > ≡
    m4_4htfildest : m4_4htfilsource
        cp m4_4htfilsource m4_4htfildest
```

◇

Fragment defined by 22e, 23abc, 25b, 27a, 29de, 30ab.

Fragment referenced in 21.

Copy the bibliography.

```
< expliciete make regels 30a > ≡
    m4_htmlbibfil : m4_nuwebdir/dutch-nlp-modules-on-Lisa.bib
    cp m4_nuwebdir/dutch-nlp-modules-on-Lisa.bib m4_htmlbibfil
```

◇

Fragment defined by 22e, 23abc, 25b, 27a, 29de, 30ab.

Fragment referenced in 21.

Make a dvi file with w2html and then run htlatex.

```
< expliciete make regels 30b > ≡
    ../nuweb/html/dutch-nlp-modules-on-Lisa.html : m4_htmlsource m4_4htfildest $(HTML_PS_FIG_NAMES) $(HTML_PS_FIG_NAMES)
    cp w2html ../bin
    cd ../bin && chmod 775 w2html
    cd m4_htmldocdir && ../bin/w2html dutch-nlp-modules-on-Lisa.w
```

◇

Fragment defined by 22e, 23abc, 25b, 27a, 29de, 30ab.

Fragment referenced in 21.

Uses: nuweb 28b.

Create a script that performs the translation.

```
"w2html" 30c≡
    #!/bin/bash
    # w2html -- make a html file from a nuweb file
    # usage: w2html [filename]
    # [filename]: Name of the nuweb source file.
    '#' m4_header
    echo "translate " $1 >w2html.log
    NUWEB=/usr/local/bin/nuweb
```

< filenames in w2html 31a >

< perform the task of w2html 30d >

◇

Uses: NUWEB 22d, nuweb 28b.

The script is very much like the w2pdf script, but at this moment I have still difficulties to compile the source smoothly into HTML and that is why I make a separate file and do not recycle parts from the other file. However, the file works similar.

```
< perform the task of w2html 30d > ≡
    < run the html processors until the aux file remains unchanged 31b >
    < remove the copy of the aux file 28a >
```

◇

Fragment referenced in 30c.

The user provides the name of the nuweb file as argument. Strip the extension (e.g. .w) from the filename and create the names of the L^AT_EX file (ends with .tex), the auxiliary file (ends with .aux) and the copy of the auxiliary file (add old. as a prefix to the auxiliary filename).

```

⟨filenames in w2html 31a⟩ ≡
    nufil=$1
    trunk=${1%.*}
    texfil=${trunk}.tex
    auxfil=${trunk}.aux
    oldaux=old.${trunk}.aux
    indexfil=${trunk}.idx
    oldindexfil=old.${trunk}.idx
    ◇

```

Fragment referenced in 30c.

Defines: `auxfil` 27d, 28c, 31b, `nufil` 27d, 28b, 31c, `oldaux` 27d, 28ac, 31b, `texfil` 27d, 28b, 31c, `trunk` 27d, 28b, 31cd.

Uses: `indexfil` 27d, `oldindexfil` 27d.

```

⟨run the html processors until the aux file remains unchanged 31b⟩ ≡
    while
        ! cmp -s $auxfil $oldaux
    do
        if [ -e $auxfil ]
        then
            cp $auxfil $oldaux
        fi
        ⟨run the html processors 31c⟩
    done
    ⟨run tex4ht 31d⟩
    ◇

```

Fragment referenced in 30d.

Uses: `auxfil` 27d, 31a, `oldaux` 27d, 31a.

To work for HTML, `nuweb` *must* be run with the `-n` option, because there are no page numbers.

```

⟨run the html processors 31c⟩ ≡
    $NUWEB -o -n $nufil
    latex $texfil
    makeindex $trunk
    bibtex $trunk
    htlatex $trunk
    ◇

```

Fragment referenced in 31b.

Uses: `bibtex` 28b, `makeindex` 28b, `nufil` 27d, 31a, `NUWEB` 22d, `texfil` 27d, 31a, `trunk` 27d, 31a.

When the compilation has been satisfied, run `makeindex` in a special way, run `bibtex` again (I don't know why this is necessary) and then run `htlatex` another time.

```

⟨run tex4ht 31d⟩ ≡
    tex '\def\filename{{dutch-nlp-modules-on-Lisa}{idx}{4dx}{ind}} \input idxmake.4ht'
    makeindex -o $trunk.ind $trunk.4dx
    bibtex $trunk
    htlatex $trunk
    ◇

```

Fragment referenced in 31b.

Uses: `bibtex` 28b, `makeindex` 28b, `trunk` 27d, 31a.

create the program sources Run nuweb, but suppress the creation of the L^AT_EX documentation. Nuweb creates only sources that do not yet exist or that have been modified. Therefore make does not have to check this. However, “make” has to create the directories for the sources if they do not yet exist. So, let’s create the directories first.

```

<parameters in Makefile 32a> ≡
    MKDIR = mkdir -p

```

◇

Fragment defined by 22cd, 24ab, 26d, 29b, 32a.
 Fragment referenced in 21.
 Defines: MKDIR 32b.

```

<make targets 32b> ≡
    DIRS = <directories to create 4a, ... >

    $(DIRS) :
        $(MKDIR) $@

```

◇

Fragment defined by 26a, 29a, 32bc.
 Fragment referenced in 21.
 Defines: DIRS 32c.
 Uses: MKDIR 32a.

```

<make targets 32c> ≡
    sources : dutch-nlp-modules-on-Lisa.w $(DIRS) $(NUWEB)
              $(NUWEB) dutch-nlp-modules-on-Lisa.w
              <make scripts executable 5c, ... >

```

◇

Fragment defined by 26a, 29a, 32bc.
 Fragment referenced in 21.
 Uses: DIRS 32b, NUWEB 22d.
